

I-Modified Nucleosides as DNA-Sugar Centered Radical Precursors II-DNA Excess Electron Transfer Studies III-A new Direct DNA Detection Method: DNA-Photography

Filesize: 7.79 MB

Reviews

These kinds of book is every little thing and made me looking forward and much more. I really could comprehended every little thing using this published e publication. I am just very happy to explain how this is basically the finest ebook we have read during my very own lifestyle and might be he greatest ebook for ever.

(Pascale Marvin II)

I-MODIFIED NUCLEOSIDES AS DNA-SUGAR CENTERED RADICAL PRECURSORS II-DNA EXCESS ELECTRON TRANSFER STUDIES III-A NEW DIRECT DNA DETECTION METHOD: DNA-PHOTOGRAPHY

Cuvillier Verlag Apr 2008, 2008. Taschenbuch. Book Condition: Neu. 211x149x17 mm. Neuware - During cellular metabolism of oxygen to water in the mitochondria, a small fraction of the oxygen is reductively converted into superoxide ($O_2\dot{-}$) as a by product. Through complex biochemical processes, superoxide may be converted into various reactive oxygen species (ROS), e.g. hydroxyl radicals ($\dot{O}H$), H_2O_2 , $1O_2$, etc. These ROS and in particular the highly diffusible $\dot{O}H$ are known to cause chemical modifications on DNA through the formation of strand breaks and nucleobase modifications. DNA damage and strand breaks may also be induced through other environmental influences such as ionizing radiation, photooxidation and naturally occurring or synthetic chemical mutagens. Oxidative DNA damage can be produced by the oxidation of the nucleobases or of the sugar units. In the last case carbon centered radicals are formed by direct or indirect hydrogen abstraction. In the first part of this thesis (Chapter 1), the fate of the carbon centered radicals C5' and pseudo C4' of the sugar was investigated at the nucleoside level. The syntheses of new thermal or photolabile C5' and pseudo C4' radical precursors were achieved to this end and the mechanistic aspects were studied under various conditions. Kinetic data were obtained as well and the access to biological lesions was possible through these studies. In section 1.2.1, the synthesis of a novel perester radical precursor was achieved. The unprecedented selective generation of the pseudo C4' radical was established as well. The radical was studied in solution under various conditions and the pathways of base releasing and degradation were proved and described. In section 1.2.2 a short and efficient synthetic sequence for the preparation of cyclonucleosides has been disclosed, based on consecutive radical reactions followed by a photochemical desilylation. The C5' radicals, generated by the addition of a $(TMS)_3Si\dot{O}$ radical...
