RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 40 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1909 Excerpt: . . . side, as C, perpendicular to the other side, as CE, the ratio of this line to the radius-- is the sine of the angle AB ABC. This ratio will obviously be the same whatever the radius may be, but no angle can have a sine greater than 1. Tables can be found in the back part of any trigonometry giving the tangents and sines of any angle. (See also Table 13, Appendix.) These ratios are called the natural tangents and natural sines, to distinguish them from the logarithmic sines and tangents. EXERCISE 43 REFRACTION Purpose. --To trace the path of a ray of light through a block of plate glass with parallel edges and to measure the index of refraction of the glass. st Apparatus. --A rectangular block of thick plate glass having its opposite edges parallel. A protractor. Two straightedged rulers. Procedure. --(1) Draw a line AL on a sheet of paper and place the block of glass B upon it as shown in Figure 41. Draw the lines de and fg making them coincide exactly with the edges of B; also draw ef and dg. (2) Place one ruler at K so that its edge exactly coincides with line AL. (3) Place the other ruler at H so that, as you sight along its edge uv through the glass, uv and st shall seem to be in one straight line. When it is correctly placed, hold it firmly and draw the line uv. (4)...
