RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 166 pages. Original publisher: Denver, Colo. : U. S. Dept. of the Interior, U. S. Geological Survey, 2004. OCLC Number: (OCoLC)57345465 Subject: Groundwater flow -- Computer simulation. Excerpt: . . . algorithm is used for controlling errors in the integration of the kinetic reaction rates and the equilibrium equations are solved at each intermediate step of the integration. A three-dimensional Cartesian coordinate system is used to define the region for reactive-transport simulations. Although flow and transport calculations are always three dimensional, the symmetry of conceptually one- and two-dimensional regions can be used to reduce the computational workload of the geochemical calculations. For these cases, the geochemical calculations are performed on a line or plane of nodes and then copied to the corresponding symmetric parts of the simulation region. 1. 5. Computer Resources The computer code for is written in Fortran-90 and C. The code conforms to American National Standards Institute PHAST (ANSI) standards for Fortran-90 and C, with few exceptions, and has proven portable to a variety of computer operating systems, including Windows (Windows95 or later), Linux on personal computers, and Unix on Sun, Digital...

Reviews

This pdf is wonderful. It is definitely simplified but excitement from the 50 percent in the ebook. You wont sense monotony at any time of your time (that's what catalogues are for relating to should you request me).
